

NETBEANS + GITHUB

Inicializar y Clonar Proyecto

1. Crear el repositorio en github

<https://github.com/new>

Owner: richardhell / Repository name: phobos

Public repository names are short and memorable. Need inspiration? How about [drunken-adventure](#).

Description (optional): Aplicación de prueba

Public: Anyone can see this repository. You choose who can commit.

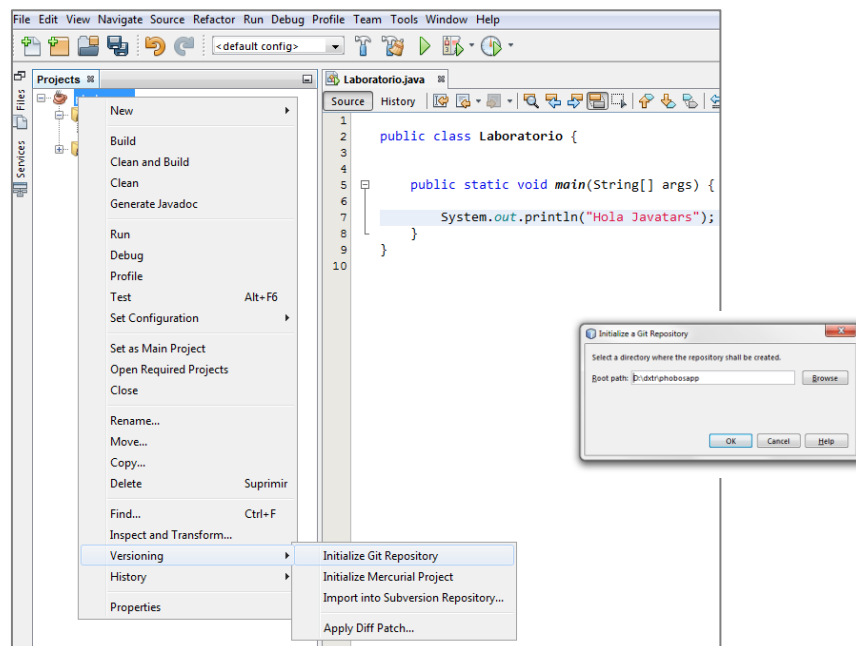

Private: You choose who can see and commit to this repository.

Initialize this repository with a README: This will allow you to `git clone` the repository immediately.

Add .gitignore: None | Add a license: None

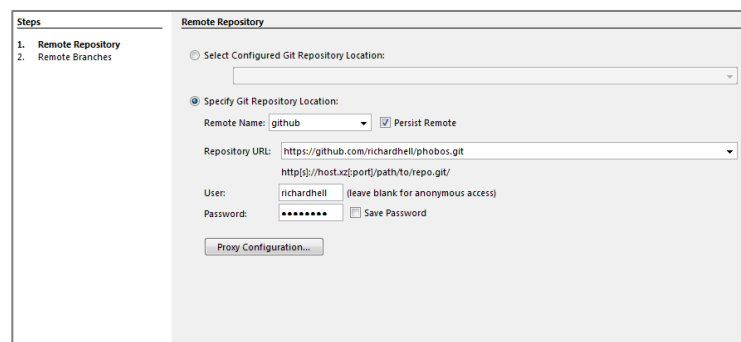

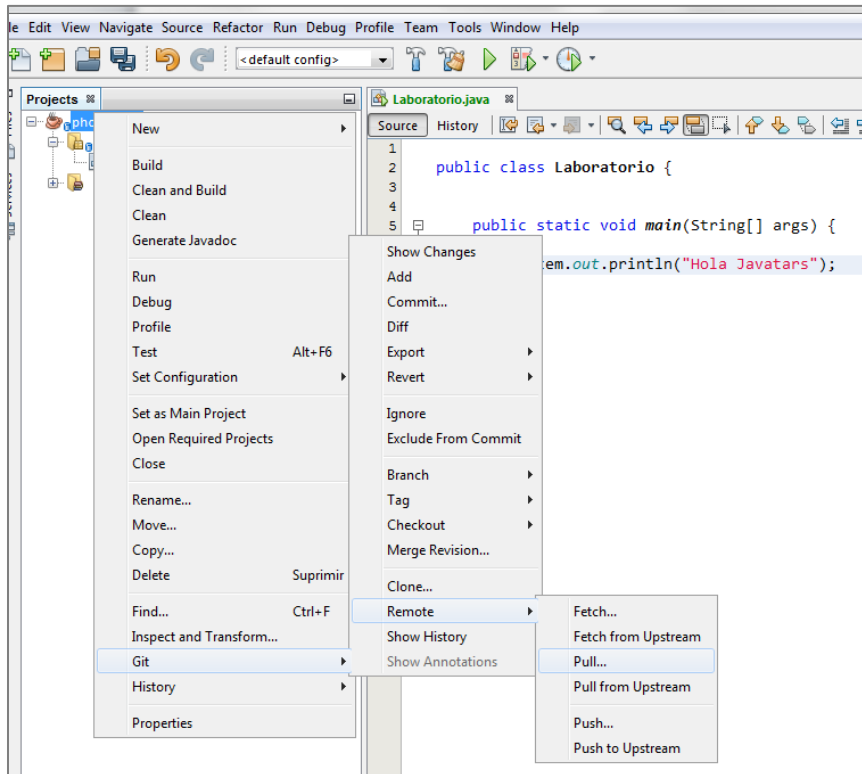

Create repository

2. Crear el proyecto en Netbeans e Inicializar como GIT

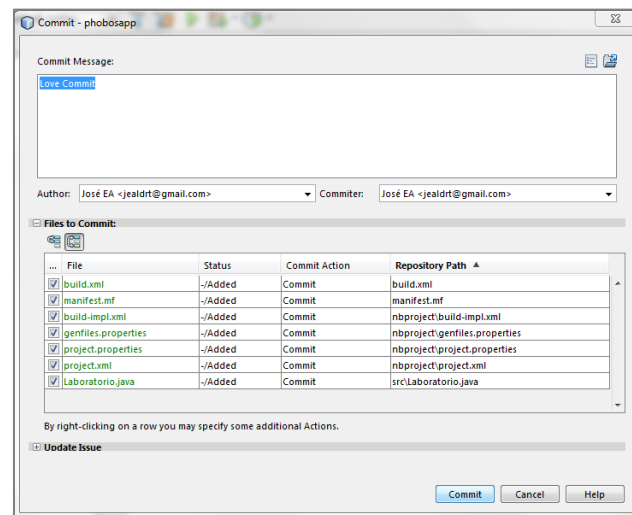

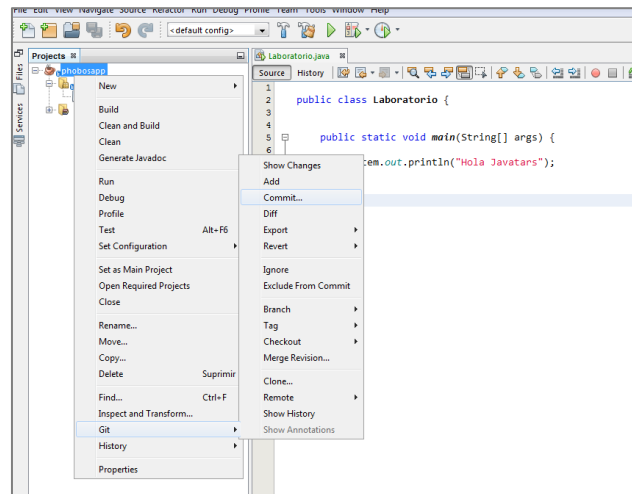

3. Clonar desde el servidor con PULL

<https://github.com/richardhell/phobos.git>

Confirmar cambios locales

1. Ejecutar "Commit"

Enviar cambios a github

1. Ejecutar PUSH
